

# EndoTrace

Small Diameter Tubing

# EndoTrace

## Small Diameter Tubing

## EndoTrace

Taking pipe detection to a whole new level.

### Applications

EndoTrace, as produced by Infra Pipes, is applicable for potable water distribution and consists of EndoPure polyethylene water pipe together with factory - installed tracer wire. Two independent, spirally wound, polypropylene tape layers hold the wire to the tubing, and combined, they form a one-step, easy-to-install system. Available in diameter sizes ranging from ¾" (19mm) through 2" (51mm), and as IPS or CTS sizing.

EndoTrace is also available in green and lavender for sewer and reclaimed water applications, respectively.

## Advantages

### Rapid Location

The factory-installed tracer wire assures rapid location of the water line.

### Cost Efficient

Reduces labour costs by eliminating the need for a separate tracer wire during installations.

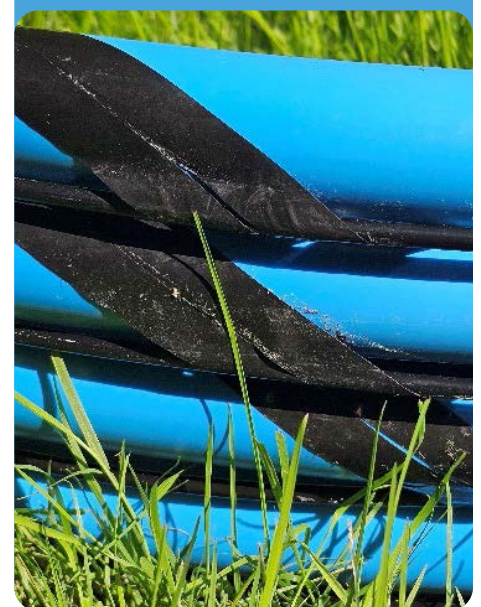

### Flexible

EndoTrace withstands wear and tear during transit, handling, and assembly, making it suitable for directional drilling as it can be horizontally bored into place.

### OTHER ADVANTAGES

- Corrosion Resistant
- 100+ Year Projected Life
- Leak-Resistant
- Easy Identifiable

## Small Diameter Tubing

### Efficient Installation

As the system eliminates the need to hand-tape wire to the tubing, it saves time during installation.

### Standards & Dimensions

Refer to the EndoPure Standards & Dimensions.

### Material Standards

Refer to the EndoPure Material Standards.

ENDOTRACE TRACER WIRE SPECIFICATIONS	
<b>Conductor</b>	
Guage	10 AWG Standard
Strands	Single Strand Copper Clad Steel by Copperhead
O.D.	0.1091"
Break Load	600 lbs.
<b>Insulation</b>	
Type	HDPE
Min. Wall	0.030"
O.D.	with Insulation: 0.162" Nominal
*Total weight of 10 AWG Tracer Wire: 32.5 lb. per MFT
