

Ottawa River

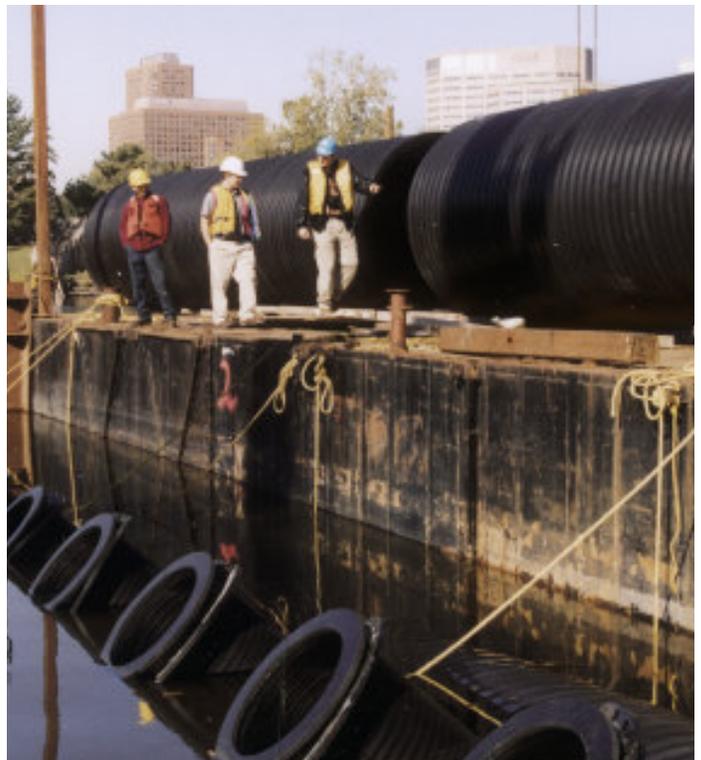

Heating / Cooling Intake

Project: Cliff Heating Water Intake, Ottawa River, Ottawa, Ontario

Owner: Public Works Government Services Canada

Application: Replacement of Heating/Cooling Water Intake for Canada's Parliament Buildings

Public Works Canada selected Weholite to replace an aging existing intake for the main heating and cooling plant that serves all the Parliament buildings on Parliament Hill in Ottawa, the Nation's Capital.

The 78" Weholite intake includes 14-60" diameter intake nozzles. All joints were extrusion fused on-site and marine divers connected the flanged nozzles.
