

# Hwy 198 Bypass, Visalia, California

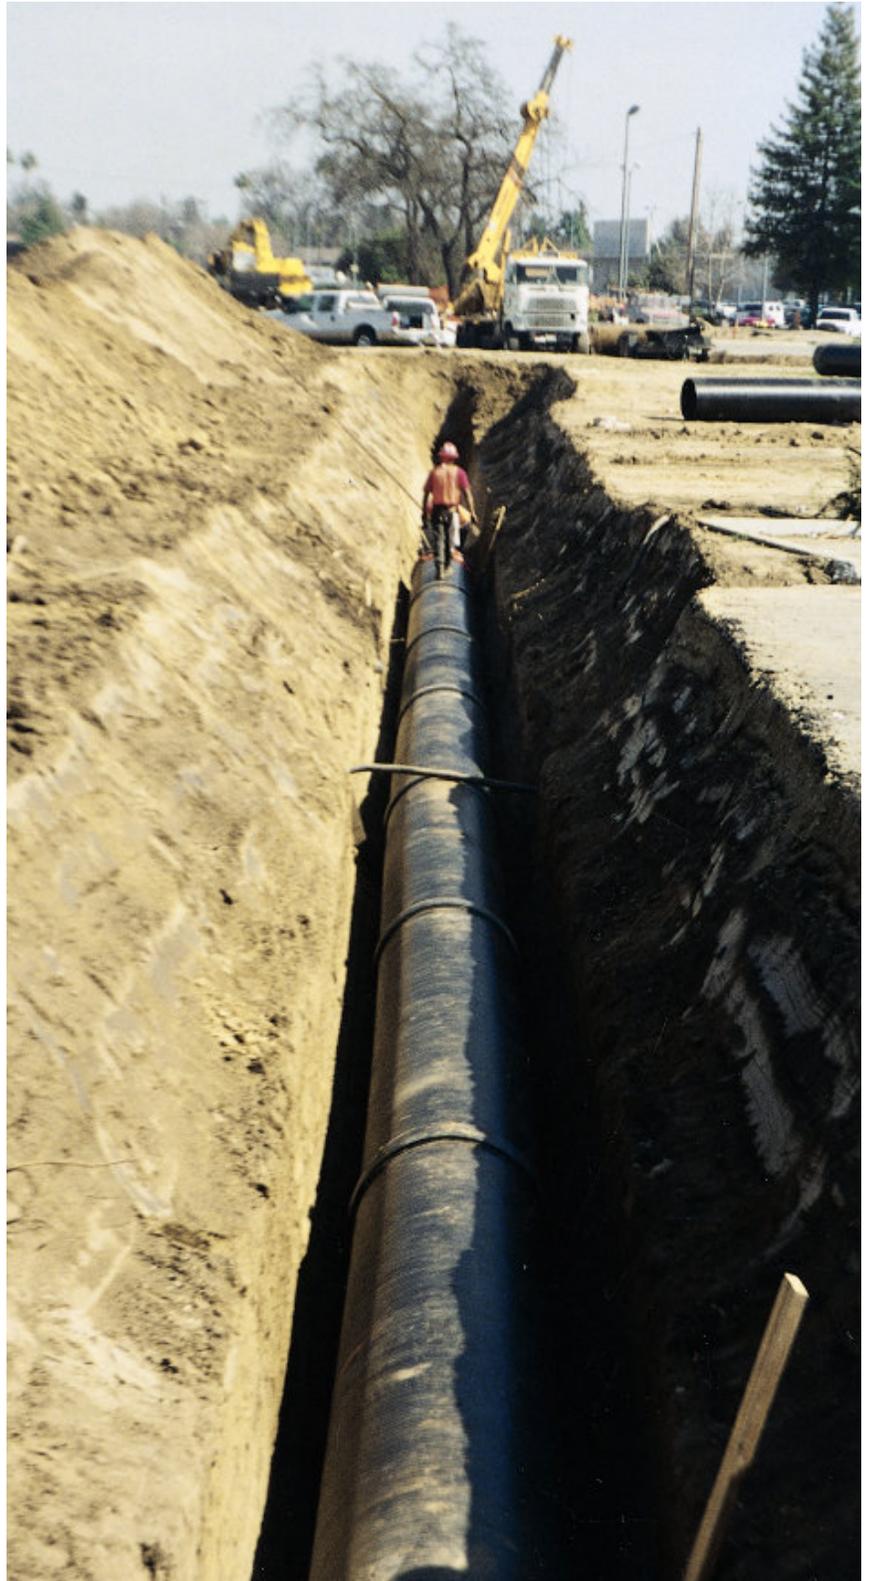

## Weholite for Sanitary Sewer Line Improvement

**Project:** Hwy 198  
Bypass  
Improvement

**Owner:** California  
Department of  
Transportation

**Application:** 30" Sanitary  
Sewer Line

**Contractor:** Rising Sun  
Construction  
Inc.

In March of 1999, Rising Sun Construction, Inc. began construction of a major bypass improvement sewer on state highway 198 located in Visalia, California. Included in the scope of the project was the installation of 7,300 linear feet of 30" diameter Weholite to be used as an outfall line. This sanitary sewer line was subsequently turned over to the City of Visalia after completion of the project.

The contractor selected Weholite for this particular application due to the ease of installation and lower cost as compared to other specified materials such as vitrified clay pipe, PVC-lined concrete pipe and other profile-wall thermoplastic pipes.
