

Portola Valley CMP Rehabilitation

Storm Drain Rehabilitation

Project: Portola Valley
CMP Rehab.

Owner: California
Department of
Transportation

Application: Storm Drain
Rehabilitation

Contractor: Bugler
Construction
Company

In February of 1999, Bugler Construction rehabilitated 550 feet of 36" diameter and 220 feet of 24" diameter corrugated metal pipe. Bugler Construction selected light weight Weholite because of its ease of handling. The material was easily lowered down the steep grade and installed with the use of a winch. The pipe was joined using Wehoseal heat bonded joints. The project was finished in a few short days saving both time and money as compared to conventional repair methods such as dig-and-replace.
